

Kayman-KY102

Line array element, variable beam speaker

DESCRIPTION

The K-array Kayman-KY102 is a passive speaker system comprised of eight 4" neodymium magnet transducers housed in an elegant and sturdy stainless steel chassis. The vertical dispersion pattern can be switched for wide or narrow coverage, allowing for a great variety of applications. The eight closely spaced cone drivers provide true line array characteristics - phase coherence, low distortion and focused listening in both the near field, and at a distance from the speaker. A variety of

rigging accessories provides many linking and hanging options for the KY102 to be joint in vertical and horizontal line array configurations to satisfy many different venue requirements during temporary events and for permanent installations. For easier use and integration with other speakers or amplifiers, the KY102 allows the user to select two different values of impedance (8Ω - 32Ω). The KY102 is able to reproduce the whole vocal frequency range with high

intelligibility. Integrating one of K-array powered subwoofers (KMT18, KMT21, KMT218), configured with specific presets for the KY102 assures excellent coverage of the entire musical frequency range. The K-array KA amplifier series have pre-sets optimized for KY102 use. All KY102 components are designed by the K-array R&D department and custom-made under the K-array quality control system.

Pure Array Technology (PAT)

Composed of closely-spaced, full-range sound sources, our line array elements feature Pure Array Technology. With no crossover and no reflex, a perfect phase response is achieved in both the near and far fields, making these columns the perfect solution to cover long distances uniformly. The narrow vertical coverage minimizes the sound spill towards the ceiling and the floor, thus increasing the intelligibility in highly reverberant environments.
